Windows collaboration display
PN-CD701: 70" Class (69.5" diagonal) 4K Ultra HD interactive display

www.SharpUSA.com
Always smarter meetings.

Productivity doesn’t just depend on the time that we put in, but also on the quality of work we do – using the best possible tools.

For teamwork to be truly effective, people need to easily connect and share ideas and information in a comfortable environment – whether they are working in a meeting space, conference room or anywhere in the world.

The Windows collaboration display from Sharp is a next generation 70” Class (69.5” diagonal) 4K Ultra HD interactive display that enables better space utilization and more productive collaboration in meetings, boardrooms, training rooms, technical reviews and almost anywhere else.

As well as using Sharp’s award-winning display technology, together with a built-in microphone array, 4K camera and IoT sensor hub, it exceeds Microsoft’s specifications and also works seamlessly with the best Microsoft 365 collaboration tools. Furthermore, it’s all connected to the cloud to deliver outstanding ease of use and enable the continual analysis of meeting room conditions and usage.

Our Windows collaboration display has won an award for Best New Collaboration Board in the 2019 Best of ISE Awards (rAVe publications) and for 2019 Top New Technology (TNT) award for displays. (CE Pro and Commercial Integrator magazines).*

Walk in, plug in and work together

Setting up the technology needed for a meeting can be very time consuming and frustrating. But you simply “plug and play” with the Windows collaboration display from Sharp.

It is so simple to walk into a room, plug in your device and start working together straightaway. Just connect its 8m long USB-C cable and it automatically switches to the right input for whatever information you want to display. You’re instantly ready to start your meeting – saving up to 10 minutes* time trying to set up connections.

This single USB-C connector, which is also used with the latest Windows and Apple® Mac® notebooks, provides high-speed, high-bandwidth data transfer for multiple functions, including 4K video, high-quality audio, internet network and application data. And it can also provide power for attached mobile devices. However, for added flexibility, a wireless connection is included for lower bandwidth data transfer. And, any hardware without a USB-C connection can still use the full functionality of the Windows collaboration display using a HDMI and USB Type B cable combination.

Better places to meet
Creating a comfortable environment in your meeting rooms pays real dividends in terms of helping people concentrate and improving productivity. The Windows collaboration display from Sharp has built-in sensors that can connect to the Microsoft Azure Digital Twins IoT platform, and other commercially available cloud and subscription services such as Sharp WorkSpace Intelligence,* as part of a smart building environment. Azure is a powerful, managed cloud service that acts as a central data store and can provide additional data processing intelligence. By collecting and analyzing real-time data from across the digital and physical worlds, it automatically monitors ambient conditions and helps with optimization of space utilization once connected to a smart building back-end analytics system.

IoT sensors
- **Occupancy** – a motion sensor detects the presence of any people in the room. An additional artificial intelligence (AI) service can analyze this data, automatically switch on displays and other equipment to enable a faster setup, and help improve the scheduling of room bookings. During a meeting, the sensor can also be used by another AI service to detect the location of whoever is speaking and control a three-dimensional microphone array to focus on the relevant person.
- **Temperature** – its intelligent climate measurement can be used by an AI service to automatically regulate the room temperature and relative humidity to make the room feel more comfortable. By intelligently optimizing the operation of the air-conditioning it also helps reduce costs.
- **Light** – an ambient light sensor helps with intelligent lighting control, as it automatically measures the level of light. An AI service can then adjust the screen to compensate for the in-room lighting with the changing day and night time conditions, which can reduce eye strain and save money on wasted energy.
- **Air quality** – The Windows collaboration display continually measures and analyzes the ambient air quality** in the meeting room and can assist another AI service in automatically adjusting the air-conditioning to provide the best possible working environment.

---

* Available later 2019.
** Measure the levels of eCO₂ (Equivalent Carbon Dioxide) and TVOC (Total Volatile Organic Compounds).
A more natural approach.

When ideas are flowing you need to be able to work quickly and intuitively, without having to struggle with the technology.

Even in the most highly interactive meeting, the Windows collaboration display from Sharp ensures that information can be shared and captured quickly and precisely.

**Simply much easier**

With its 10-point Projected Capacitive (PCAP) touch technology and direct optical bonding, it provides a more accurate and natural Pen-on-Paper® experience. Writing on-screen is just as quick and effortless as writing on a flipchart or whiteboard. By using either a finger or pen, notes and comments can be quickly added as simple text or by drawing freehand to highlight changes and annotate the information on-screen. This means that in boardroom presentations, you can quickly give the big picture overview, but also focus on key details to keep everyone engaged and ‘eyes up’.

Thanks to the Windows collaboration display’s exceptional responsiveness and ease of use, it also:

- **Speeds-up collaboration** – users can work together immediately, with little to no training, which encourages more engagement and interactivity.
- **Builds confidence** – users feel more confident and willing to participate and present and share information.
- **Increases concentration** – users can focus on the delivery of content with no technical distractions.

**Fast, precise control**

The Windows collaboration display comes with a Passive pen as standard. Designed with a precise 2mm tip, this powerful and ergonomic stylus sits comfortably in the hand and enhances the Pen-on-Paper experience. It is ideal for discussing complex technical information or graphics, such as architectural plans or engineering designs, where you need to review even the smallest details.

Actively using the data collected by the Windows collaboration display and making physical changes to how rooms are used and controlled is best achieved using the services of additional smart building facilities managers. Sharp is working with leading businesses to build a comprehensive ecosystem for the creation of smart meeting spaces that enable truly effective collaboration.
All you need to do more

Business teams come in all shapes and sizes – from tactical workgroups to large-scale, established project teams – and often span both local and global locations. But to be truly effective, they need to share ideas openly and inclusively.

The Windows collaboration display from Sharp will be certified for Microsoft Teams and Skype for Business. It offers the highest quality audio and video and provides the best ways to connect and collaborate using the power and productivity of Microsoft 365 at room scale.*

• **Microsoft 365** provides familiar Microsoft Office applications that enable people to be more creative, work together more effectively and have a more productive experience. It also includes advanced security and device management capabilities to help safeguard your business.

• **Microsoft Teams** is a complete chat, notes, attachments and online meetings solution. It includes annotation, overlay and presentation tools, along with seamless video conferencing and collaboration tools. So whether everyone is in a meeting room or spread around the world, it still feels like you’re all together.

• **Microsoft Azure Digital Twins** is an IoT platform that creates a comprehensive model of physical environments. Data from multiple IoT sensors is stored in a reliable and secure private cloud database and can be analyzed, for example, by a third-party smart building dashboard solution, to help optimize the management of office space.

* The mentioned software and services are available as an additional purchase and are not included in shipping with the Windows collaboration display.
Look & work smarter.

Technology should not only enhance your productivity, but also your workplace.

Imagine a collaborative space where the technology is designed to ensure effortless control and collaboration, but also adds an extra touch of style. That’s exactly what you get with the Windows collaboration display from Sharp.

Stylish design
The display has an attractive and elegant edge to edge design that looks good in even the most prestigious corporate boardroom:

- The On Screen Display (OSD) buttons are discretely located on the front for quick and easy control.
- The 4K videoconferencing camera and IoT sensor hub have been integrated neatly on the top of the display.
- An integrated directional array microphone invisibly picks up sound from anywhere within a range of 4-6 meters.
Effortless device sharing
The Windows collaboration display has built-in wireless casting that works with Windows®, Android® and other devices. As a result, you can simply connect your own device to the display and easily share and display any information.

Up to five* devices can be connected simultaneously and the Touch Back control enables you to control screen content from either the display or the source device. So it is ideal for dynamic workgroups discussions or interactive training sessions as it allows you to work more efficiently, encourages active involvement and provides a more effective way of learning.

The Windows collaboration display can split into two separate screens, putting it into Picture by Picture (PbP) mode. The Windows collaboration display will show up to two different connected devices out of the five possible options. The two screens can be any combination of inputs, for example, 1 USB-C + wireless 1, or HDMI + wireless 2.

Touch Back is also a feature that works in PbP mode, with whichever attached device is active. Touch back control automatically switches between the two PbP displays, depending on which side is touched.

*USB-C x2, Wireless x2, HDMI x1
## Specifications

### General

**Installation**
PN-CD701  Landscape

### LCD Panel

- **70" Class (69.5" diagonal) UV2A LCD**
- **Max. resolution**: 3,840 x 2,160 pixels
- **Max. display colours (approx.)**: 1.06 billion colors
- **Pixel pitch (H x V)**: 0.401 x 0.401 mm
- **Max. brightness (average)***: 350 cd/m²
- **Contrast ratio**: 4,000 : 1
- **Viewing angle (H/V)**: 176°/176° (CR >10)
- **Active screen area (W x H)**: 1,538.9 x 865.6 mm
- **Response time**: 6 ms (gray to gray, avg.)
- **Backlight**: W-LED, edge lit

### Touchscreen

- **Touch technology**: Projected Capacitive (PCAP) touch
- **Direct optically bonded**: Yes
- **Palm reject**: Yes
- **PC connection port**: (2.0) Type B x2
- **Power supply**: Supplied from main unit
- **Multi touch**: 10 points
- **Protection glass**: Thickness: approx. 1.9 mm**
- **Shock resistance**: 130 cm**

### Pen

- **Passive touch pen**: Standard with the Windows collaboration display

### Wireless Casting

- **Wireless communication method**: 2.4 GHz, IEEE802.11 b/g/n; 5 GHz, IEEE802.11 a/n/ac
- **Supported devices**: Windows and Android

### Computer Input

- **HDMI**: (HDCP PC/AV signal compatible) x1
- **USB**: (3.0 downstream) Type B x1
- **USB-C**: (PD Profile-4, 60W) x2
- **Video**: HDMI™
- **Plug & play**: Yes
- **Power management**: Yes
- **Input terminals****: USB-C x 2, HDMI (HDCP PC/AV signal compatible) x 1,

### Input/Output terminals

### Speaker output

- **Built-in**: 12 W + 12 W
- **Power supply**: 100V - 240V / AC 50/60Hz
- **Power consumption**: 550W max

### Environmental conditions

- **Operating temperature**: 5°C to 35°C
- **Operating humidity**: 20% to 80% RH (no condensation)

### Dimensions (W x D x H)

- **(display only)**: 63-29/32" x 3-17/32" x 38-7/16"

### Weight (display only)

- **149.9 lbs.**

### Main accessories

- **AC power cord**, remote control unit, battery (AA size x2), set-up manual, USB-C cable (8.0 m), passive touch pen

### Unified Communications

- **Output connector**: USB (3.0) Type B

### Camera resolution

- **4K @ 30fps**

### Camera field of view

- **120°**

### Microphone

- **Array microphone x 4**

### Sound collecting distance

- **4-6m**

### IoT Sensor Hub

- **Output connector**: USB (2.0) Type B

### AI camera

- **Resolution**: 1,920 x 1,080 @30 fps
- **Color space**: YUY2, MJPEG
- **Field of view**: 74.8°

### Motion sensor

- **Sensor type**: Microwave
- **Detection area**: 140°(Horizontal) / 70°(Vertical)
- **0dB level**

### Light sensor

- **Selectable LUX ranges**: 128/256/512/1024/2048
- **Processing**: 50/60Hz flicker noise and IR rejection

### Air quality sensor

- **Gas types**: eCO2, TVOC

### Temperature humidity sensor

- **Temperature range**: -40°C to +100°C
- **RH range**: 0% - 100%

---

**Note**: UV2A stands for Ultraviolet-induced Multi-domain Vertical Alignment, a photo-alignment technology that ensures uniform alignment of liquid crystal molecules. **Brightness** depends on input mode and other picture settings. Brightness level will decrease slightly over the lifetime of the equipment. Due to the physical limitations of the equipment, it is not possible to maintain a precisely constant level of brightness. **Approximate distance at which the glass panel can withstand the impact of a 500-gram iron ball dropped on its center.** **Use a commercially available connection cable for PC and other video connections.**
